Technical Projects

NBA Quiz App - [Github](#) | [Github Server](#) | [Live](#)

Completed Full Stack NBA trivia app where users are able to create an account and take quizzes on all of the 30 teams, based on the 2017-2018 NBA season

Skills - **HTML5 / CSS3, React, MongoDB, NodeJs, Express, AJAX, TailWind**

- Integrated MongoDB with Node to send 30 NBA logos and user data to the client
- Introduced the React Context API to provide the parameters for the quiz, which can be between 4 and 10 questions long
- Increased accessibility and performance by 100% using minimal HTTP requests and optimizing images
- Fetched data asynchronously from an external API using async/await to get the stats and images of 400 different NBA players and dynamically create questions

Samas-SportingGoods - [Github](#) | [Live](#)

Retrieves 23 JSON objects from an API and builds products with filters that users interact with. Users may log in and add these products to their cart dynamically and proceed to check out.

Skills - **HTML5 / CSS3, React, React Hooks, Auth0, Webpack**

- Utilized React Hooks to reduce code by 25% and manage state across components
- Reduced page reloads to 0 and increased speed by using React Router DOM
- Implemented User Authentication with auth0 to enable login using Google or Twitter
- Attained custom, modularized styling that reduced global styles by 25% with styled-components

NFT-Collector - [Github](#) | [Live](#)

Launched a full-stack app that comes with 9 default Bored Ape NFTs. Users may buy and sell. Users are also able to design custom NFTs, and update usernames and passwords.

Skills - **HTML5 / CSS3, JavaScript (ES6+), NodeJs, Express, AJAX, RESTful API**

- Developed Node Server with the CRUD operations in a RESTful manner with 7 different endpoints, allowing users to interact with NFTs and change account information
- Introduced responsive design using flexbox, grid, and media queries for screens smaller than 768px
- Transformed request structure by creating an HTTP request library to reduce code by 10 lines per request
